SALVADORAN EDUCATION

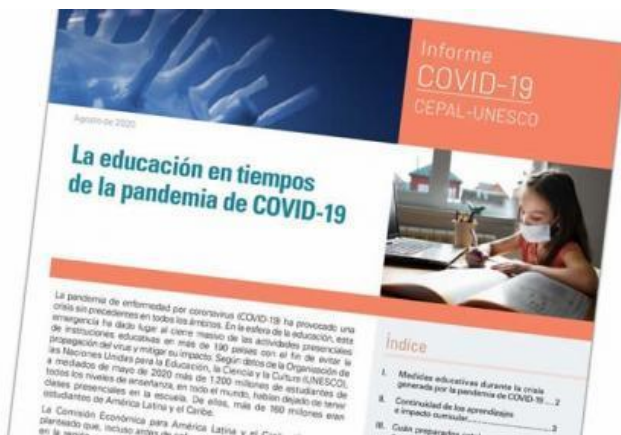

I am currently a 2nd year student of the General high school, who is interested in this subject about being able to know what was the beginning of said subject and how it is currently. Between the years of 2000 to 2018, education in the public and private areas was better recommended, since they focused stricter techniques and instruments for the learning of the directed students, the teachers were more focused and equivalent in the way of promoting general achievements in students from different areas. The assessment that was given in education in the years 2018-2020 was declining at the national level, especially at the beginning of the pandemic that had to adapt to a new education technique, it was distance education, including technology as a way of teaching and learning.

The progress of the government of the current president of the Republic of El Salvador, generating higher income in the educational area, giving techniques and instruments to each individual student in El Salvador, for example (tablets, computers, internet, training, projects, among others). This generated a radical change for different families in areas with limited economic resources to continue their studies in the virtual environment due to the problems of the Covid-19 Pandemic between the years 2019-2022, taking into account the sanitary measures given by the Ministry of Health with the Ministry of Education.

The correlation of the educational and social system has been implemented based on projects which have been affecting various areas of the students of El Salvador. The Government's interest in students increased by 37% compared to the governments of previous years, simulating a better vision of academic performance. Has the pandemic interfered with the academic performance of students in El Salvador? Yes, since new techniques had to be implemented in the area of education, including new instruments such as technology to work from home and comply with the academic obligations that the Ministry of Education gave to public and private institutions. How was Education like before the pandemic and what is Education like today in El Salvador? Before: Before education there was a digital gap in which the majority of the Salvadoran population did not have an electronic device. In addition, the

governments of before were not interested in education, likewise, not all children and young people had access to study because they were dedicated to work. Now: students are more qualified in the virtual and physical area to receive education in the various modalities, in addition, teachers have both educational and psychological training to implement a better development in students, now with the new government of the current president of El Salvador "Nayib Bukele" has implemented self-development measures in the educational field.

Knowledge of education before and after the Covid-19 pandemic in El Salvador.
